I. SUMMARY

I am interested in a broad range of scientific phenomena, especially for the academic system. I am trying to answer how the academic system is organized, how the academic knowledge spreads, how the researchers grow up and survive in academia, and how do we use these understandings to make decision making. To do this, I did broad researches from modelling dynamics to data analysis. I use methodologies in complex system, network science, and machine learning.

Main Research Interest: Complex System, Computational Social Science, Science of Science, and its applications.

Main Methodology: Network analysis, Game theory, Natural language processing, etc.
